2) Well, the argument is not enough to directly jump to the conclusion that Ronnie's Auto repair shop will be doing good at Jenny's new location and Jenny's former location was a better str. I believe, ~~just~~ Ronnie's Auto repair shop commenced just 4 months ago and since he intends to open a big shop in adjacent town doesn't necessarily means that it will prosper more. Maybe in adjacent town there may be more auto repair shops which are well established and to compete with them may be quite challenging. and on the other hand, Jenny may have faced some losses in it's new location because there may be less more, beauty parlours and her shop since is not recognised it is facing some losses but after some time when people are satisfied with the service provided, by Jenny's beauty parlour they may start visiting her parlour more and she may earn profits.

The ~~st~~ argument given would have been strong if some other factors like, competition, in the town and more customer in the new town and, if Jenny's parlour was the only parlour at it's former location, then the conclusion would have been strong but since

many major factor were not listed ~~the~~  
It was quite early to directly jump upon  
the conclusion. A little more information  
about the ~~turn~~ and demand supply ratio  
would have been better to make such conclusion.

3)

- Check if mouse is an optical mouse or not.
- Verify the USB connecting the mouse and your system are working fine.
- Check if left click and right click are working fine.
- Check the time duration between clicks and cursor movement to verify it is properly synchronised.
- Check the double click is working or not.
- Check the pressure applied for clicking mouse button.
- Check the clicking and dragging option is working fine.
- Check the range up to which mouse remains operational.
- Check the battery requirement of the mouse.
- Check the scrolling button is working properly.
- Check the dimension of the mouse if it is suitable to grip and work.
- Check if it works on all the allowed surfaces.

All these qualities help us find if the mouse is of good quality and easy to use.
